

Executive Presentation

E-Commerce RFM Customer Segmentation & CRM Analytics

Slide Outline — C-Suite Briefing Deck

Presenter: Mohammad Ammar — Principal Data Analytics Consultant **Audience:** CMO, Head of CRM & Retention, VP of Analytics & BI **Reference documentation:** reports/Executive_Report.md

Slide 1 — Title

E-Commerce RFM Customer Segmentation & CRM Analytics Behavioral cohorting, revenue concentration, and churn prevention for the Olist marketplace *Project 2 of 4 — Enterprise Business Intelligence Suite*

Slide 2 — The Business Question

“We’re spending marketing budget the same way on every customer. Which customers actually drive our revenue — and which are about to leave?”

Reference: docs/03_Business_Problem.md

Slide 3 — Scope of Analysis

- 94,989 unique customers (customer_unique_id)
- R\$ 15,737,667.52 total gross revenue analyzed
- Sept 2016 – Oct 2018 transaction window
- 5 relational Olist tables joined at customer level

Reference: docs/08_Dataset_Overview.md

Slide 4 — Methodology at a Glance

- **Recency:** Days since last order, NTILE(5) quintile scoring
- **Frequency:** Order count, custom CASE binning (standard quintiles fail — 90%+ of customers are single-order buyers)
- **Monetary:** Total spend (price + freight), NTILE(5) quintile scoring
- Combined scores map to 5 mutually exclusive segments

Reference: docs/10_Methodology.md

Slide 5 — The Five Segments

Segment	Customers	Revenue Share	ARPU
Loyal	41,740 (43.94%)	32.12%	R\$ 121.10
Others	25,402 (26.74%)	26.00%	R\$ 161.10
Champions	13,354 (14.06%)	25.98%	R\$ 306.21
Lost	12,593 (13.26%)	13.18%	R\$ 164.67
At Risk	1,900 (2.00%)	2.72%	R\$ 225.23

Slide 6 — Finding 1: Revenue Concentration

Loyal + Champions = **58.10% of revenue (R\$ 9.14M)** from **58.00% of customers**. Champions ARPU is **2.53x** Loyal ARPU (R\$ 306.21 vs. R\$ 121.10).

Slide 7 — Finding 2: Active Churn Exposure

1,900 At-Risk customers carry **R\$ 427,933.15** in exposure. Second-highest ARPU of any segment (R\$ 225.23) — this is high-value churn, not low-value attrition.

Slide 8 — Finding 3: Dormant Revenue Equity

12,593 Lost customers previously generated **R\$ 2,073,734.79**. A 5% win-back rate recovers **R\$ 100K+** at near-zero acquisition cost.

Slide 9 — Recommended Actions

Segment	Action	Timing
Champions	VIP loyalty tier & priority servicing	Phase 1 (Wk 1-4)
At Risk	Automated 14-day inactivity win-back	Phase 1 (Wk 1-4)
Loyal	Cross-sell recommendation engine	Phase 2 (Wk 5-8)
Lost	Automated low-cost win-back emails	Phase 3 (Wk 9-12)

Reference: docs/13_Business_Recommendations.md

Slide 10 — Expected Impact

Objective	Target	Value Unlocked
At-Risk reactivation	Recover 15-20% of cohort	R\$ 64K-R\$ 85K protected
Champion ARPU retention	Maintain >R\$ 300 ARPU	R\$ 4.09M secured
Loyal ARPU uplift	+10% ARPU	+R\$ 505K incremental
Lost win-back	5% reactivation	+R\$ 100K+ recovered

Reference: docs/15_Conclusion.md

Slide 11 — Live Dashboard

Interactive Tableau dashboard for self-service segment exploration:
https://public.tableau.com/views/RFMAnalysis_17734745913220/Dashboard4

Slide 12 — What This Is Not

- Not a predictive churn model — descriptive, transaction-based segmentation only
- Not real-time — recency is calculated against a fixed historical snapshot
- Does not include demographic or web-behavioral data

Reference: docs/14_Limitations.md

Slide 13 — The Ask

Approve segment-differentiated CRM execution across four workstreams (Champions, Loyal, At Risk, Lost) per the phased roadmap in reports/Management_Report.md.

Slide 14 — Portfolio Context

This project is **Project 2 of 4** in the Enterprise Business Intelligence Suite: 1. Revenue & Sales Performance Analysis 2. **Customer RFM Segmentation Analysis (this project)** 3. Customer Cohort Retention Analysis 4. Month-over-Month Growth Analysis
